This is an ability test where I try to find out if it is possible to use a device like Leap Motion to develop a gesture-based test in form of a game, which could be used to screen children for fine motoric or eye - hand coordination problems.
I am not testing your child but rather an idea and the system that I have developed.

All data is anonymous. The child's identity will never be revealed. Only a number is registered for every participant.

Participant #:

Run#	AGE	GENDER	R/L HANDED	NOVICE/ EXPERIENCED	FINISHED THE GAME	UNDERSTOOD THE TASK	TIME	HITS
